**Fuzzy Logic** Vladimir Dimitrov, Victor Korotkich, 2002-02-26 At the beginning of the new millennium fuzzy logic opens a new challenging perspective in information processing This perspective emerges out of the ideas of the founder of fuzzy logic Lotfi Zadeh to develop soft tools for direct computing with human perceptions The enigmatic nature of human perceptions manifests in their unique capacity to generalize extract patterns and capture both the essence and the integrity of the events and phenomena in human life This capacity goes together with an intrinsic imprecision of the perception based information According to Zadeh it is because of the imprecision of the human imprecision that they do not lend themselves to meaning representation through the use of precise methods based on predicate logic This is the principal reason why existing scientific theories do not have the capability to operate on perception based information We are at the eve of the emergence of a theory with such a capability Its applicative effectiveness has been already demonstrated through the industrial implementation of the soft computing a powerful intelligent technology centred in fuzzy logic At the focus of the papers included in this book is the knowledge and experience of the researchers in relation both to the engineering applications of soft computing and to its social and philosophical implications at the dawn of the third millennium The papers clearly demonstrate that Fuzzy Logic revolutionizes general approaches for solving applied problems and reveals deep connections between them and their solutions

when learning general type 2 fuzzy logic systems The work shows that interval type 2 fuzzy logic systems added more abilities to modelling information and handling uncertainties than type 1 fuzzy logic systems but with a cost of more computations and time For general type 2 fuzzy logic systems the clear conclusion that learning the third dimension can add more abilities to modelling is an important advance in type 2 fuzzy logic systems research and should open the doors for more promising research and practical works on using general type 2 fuzzy logic systems to modelling applications despite the more computations associated with it
