

4. Check the quick release levers so that they do not interfere with any other bicycle part or accessory part such as fenders and so that they will not become accidentally engaged by obstacles in the path of the bicycle (Figs. 10 and 11).

5. Do these two tests to ensure that you have adequately performed these procedures:

- Pick the front of the bike off of the ground, and give the top of the tire a sharp downward blow (Fig. 12). The wheel should not come off, be loose, or move from side to side. If necessary, repeat the tightening process, as shown in Steps 3 and 4 of these instructions.

- With the quick release lever properly adjusted and in a closed position, you will not be able to make the quick release lever in a circular motion parallel to the wheel (as opposed to the flipping motion used to open and close the quick release lever) see (Fig. 14).

6. For the rear wheel, follow the instructions for the front wheel, and note the correct position of the quick release lever when closed (Fig. 11).

If your bicycle is equipped with axle nuts instead of quick release mechanisms, make sure the axle nuts are tightened to 230-250 N•m (14.7-22.7 NMA). Use this test to ensure that you have adequately performed these procedures:

- Pick the front of the bike off of the ground, and give the top of the tire a sharp downward blow (Fig. 12). The wheel should not come off, be loose, or move from side to side. Repeat this test again for the rear wheel.

**WARNING:** Failure to tighten wheel axle nuts, or failure to have wheel quick release retention mechanisms properly adjusted and closed, can result in loss of control and may result in an accident resulting in bodily injury.
