- The capabilities of the fragment-based methods have been substantially expanded:
 - Full automatic IR prediction can now be used (Comment 1)
 - The CCPT2 (Mulliken, Minkwitz) and CCPT2 (Minkwitz) methods now support transition state computations of vibrational frequency and position functions.
 - Vibronic computations now include EX-1 (Comment 12). This code has also been significantly optimized.
 - The output has been made more readable.
- Raman and Raman-IR intensities can be calculated separately from calculation of the linear polarizability and normal modes, in addition using a larger basis for those properties as recommended in P. Chomontet et al. The keyword **RAMAN** (or **RAMAN**) requests that the force constant be picked up from the checkpoint file (i.e., from a previous Hartree-Fock calculation) and non-polarizability derivatives (and the other two tensor derivatives for Raman) be computed and combined with the linear polarizability derivatives and spectra. For a full discussion see the example in the two-step Raman calculation.
- Time-dependent DFT calculations can employ the Fermi-Dirac approximation via the **TDApprox** keyword.
- An energy compressor specialized for CRI and TCI transition energies via the following new options in **CR**, **TD** and **TC**:

CR=CR=N	Generate initial guess using only active occupied orbitals N and higher.
CR=CR=N	Generate initial guess at CR=N, use only the first N active occupied orbitals at CR=N, the rest use the highest N occupied.
CR=CR=N	Generate guess using estimated excitation energies (100000 eV).
CR=CR=N	Converge only states having excitation energy < 1.00000 eV, if N=1, read threshold from input, if N=1, set the threshold to 0.00000 Hartree.
Wact=N	Specify factor by which the number of non-occupied basis functions is increased.
Wact=N	Reduce to the desired number of non-occupied basis functions.

The default for **Wact** is **Max(1, 4000/g)** where g is the order of the atomic point group. The default for **CR=CR=N** is 1 for TCI and 1 for TCI, and CRI. Large values may be needed if there are many states in the range of interest.
- Several new DFT functionals and/or empirical dispersion models have been added:
 - EmpiricalDispersion=GD3**, **GD3** or **GD3B** explicitly request Perdew-Burke-Ernzerhof (Comment 1) or Grimme's [36] dispersion (Comment) or CRI dispersion (Comment 1).

Fault Analysis in Cryptography Marc Joye, Michael Tunstall, 2012-06-21 In the 1970s researchers noticed that radioactive particles produced by elements naturally present in packaging material could cause bits to flip in sensitive areas of electronic chips Research into the effect of cosmic rays on semiconductors an area of particular interest in the aerospace industry led to methods of hardening electronic devices designed for harsh environments Ultimately various mechanisms for fault creation and propagation were discovered and in particular it was noted that many cryptographic algorithms succumb to so called fault attacks Preventing fault attacks without sacrificing performance is nontrivial and this is the subject of this book Part I deals with side channel analysis and its relevance to fault attacks The chapters in Part II cover fault analysis in secret key cryptography with chapters on block ciphers fault analysis of DES and AES countermeasures for symmetric key ciphers and countermeasures against attacks on AES Part III deals with fault analysis in public key cryptography with chapters dedicated to classical RSA and RSA CRT implementations elliptic curve cryptosystems and countermeasures using fault detection devices resilient to fault injection attacks lattice based fault attacks on signatures and fault attacks on pairing based

cryptography Part IV examines fault attacks on stream ciphers and how faults interact with countermeasures used to prevent power analysis attacks Finally Part V contains chapters that explain how fault attacks are implemented with chapters on fault injection technologies for microprocessors and fault injection and key retrieval experiments on a widely used evaluation board This is the first book on this topic and will be of interest to researchers and practitioners engaged with cryptographic engineering
