**Foundations Of Computer Science The Computer Laboratory:**

*Logic and Computation* Lawrence C. Paulson,1987 This book is concerned with techniques for formal theorem proving with particular reference to Cambridge LCF Logic for Computable Functions Cambridge LCF is a computer program for reasoning about computation It combines the methods of mathematical logic with domain theory the basis of the denotational approach to specifying the meaning of program statements Cambridge LCF is based on an earlier theorem proving system Edinburgh LCF which introduced a design that gives the user flexibility to use and extend the system A goal of this book is to explain the design which has been adopted in several other systems The book consists of two parts Part I outlines the mathematical preliminaries elementary logic and domain theory and explains them at an intuitive level giving reference to more advanced reading Part II provides sufficient detail to serve as a reference manual for Cambridge LCF It will also be a useful guide for implementors of other programs based on the LCF approach Current Trends in Hardware Verification and Automated Theorem Proving Graham Birtwistle,P.A. Subrahmanyam,2012-12-06 This report describes the partially completed correctness proof of the Viper block model Viper 7 8 9 11 23 is a microprocessor designed by W J Cullyer C Pygott and J Kershaw at the Royal Signals and Radar Establishment in Malvern England henceforth RSRE for use in safety critical applications such as civil aviation and nuclear power plant control It is currently finding uses in areas such as the de ployment of weapons from tactical aircraft To support safety critical applications Viper has a particulary simple design about which it is relatively easy to reason using current techniques and models The designers who deserve much credit for the promotion of formal methods intended from the start that Viper be formally verified Their idea was to model Viper in a sequence of decreasingly abstract levels each of which concentrated on some aspect ofthe design such as the flow ofcontrol the processingofinstructions and so on That is each model would be a specification of the next less abstract model and an implementation of the previous model if any The verification effort would then be simplified by being structured according to the sequence of abstraction levels These models or levels of description were characterized by the design team The first two levels and part of the third were written by them in a logical language amenable to reasoning and proof *Foundation for the Future* National Science Foundation (U.S.). Directorate for Science Education,1979 The Dream Machine M. Mitchell Waldrop,2018-09-25 The story of the man who instigated the work that led to the internet and shifted our understanding of what computers could be Behind every great revolution is a vision and behind perhaps the greatest revolution of our time is the vision of J C R Licklider He did not design the first personal computers or write the software that ran on them nor was he involved in the legendary early companies that brought them to the forefront of our everyday experience He was instead a relentless visionary who saw the potential in the way that individuals could interact with computers and software At a time when computers were a short step removed from

mechanical data processors Licklider was writing treatises on human computer symbiosis computers as communication devices and a now not so unfamiliar Intergalactic Network His ideas became so influential his passion so contagious that author M Mitchell Waldrop calls him computing s Johnny Appleseed In a simultaneously compelling personal narrative and comprehensive historical exposition Waldrop tells the story of the man who not only instigated the work that led to the internet but also shifted our understanding of what computers were and could be This Stripe Press edition also includes the original texts of Licklider s three most influential writings Man Computer Symbiosis 1960 which outlines the vision that led to the personal computer revolution of the 1970s his Intergalactic Network memo 1963 which outlines the vision that inspired the internet and The Computer as a Communication Device 1968 coauthored with Robert Taylor which amplifies his vision for what the network could become       Theorem Proving in Higher Order Logics Yves Bertot,Gilles Dowek,Andre Hirschowitz,Christine Paulin,Laurent Thery,2003-07-31 This book constitutes the refereed proceedings of the 12th International Conference on Theorem Proving in Higher Order Logics TPHOLs 99 held in Nice France in September 1999 The 20 revised full papers presented together with three invited contributions were carefully reviewed and selected from 35 papers submitted All current aspects of higher order theorem proving formal verification and specification are discussed Among the theorem provers evaluated are COQ HOL Isabelle Isabelle ZF and OpenMath       **National Science Foundation** United States.
