*Fundamentals of Astrodynamics and Applications* D.A. Vallado, 2001-06-30 *Fundamentals of Astrodynamics and Applications* is rapidly becoming the standard astrodynamics reference for those involved in the business of spaceflight What sets this book apart is that nearly all of the theoretical mathematics is followed by discussions of practical applications implemented in tested software routines For example the book includes a compendium of algorithms that allow students and professionals to determine orbits with high precision using a PC Without a doubt when an astrodynamics problem arises in the future it will become standard practice for engineers to keep this volume close at hand and look it up in Vallado While the first edition was an exceptionally useful and popular book throughout the community there are a number of reasons why the second edition will be even more so There are many reworked examples and derivations Newly introduced topics include ground illumination calculations Moon rise and set and a listing of relevant Internet sites There is an improved and expanded discussion of coordinate systems orbit determination and differential correction Perhaps most important is that all of the software routines described in the book are now available for free in FORTRAN PASCAL and C This makes the second edition an even more valuable text and superb reference

*Fault Tolerant Attitude Estimation for Small Satellites* Chingiz Hajiyeu, Halil Ersin Soken,2020-12-23 Small

satellites use commercial off the shelf sensors and actuators for attitude determination and control ADC to reduce the cost. These sensors and actuators are usually not as robust as the available more expensive space proven equipment. As a result the ADC system of small satellites is more vulnerable to any fault compared to a system for larger competitors. This book aims to present useful solutions for fault tolerance in ADC systems of small satellites. The contents of the book can be divided into two categories: fault tolerant attitude filtering algorithms for small satellites and sensor calibration methods to compensate the sensor errors. MATLAB will be used to demonstrate simulations. Presents fault tolerant attitude estimation algorithms for small satellites with an emphasis on algorithms practicability and applicability. Incorporates fundamental knowledge about the attitude determination methods at large. Discusses comprehensive information about attitude sensors for small satellites. Reviews calibration algorithms for small satellite magnetometers with simulated examples. Supports theory with MATLAB simulation results which can be easily understood by individuals without a comprehensive background in this field. Covers up to date discussions for small satellite attitude systems design. Dr Chingiz Hajiyeu is a professor at the Faculty of Aeronautics and Astronautics Istanbul Technical University Istanbul Turkey. Dr Halil Ersin Soken is an assistant professor at the Aerospace Engineering Department Middle East Technical University Ankara Turkey.

*Remote Sensing by Satellite Gravimetry* Thomas Gruber, Annette Eicker, Frank Flechtner, 2021-01-19. Over the last two decades satellite gravimetry has become a new remote sensing technique that provides a detailed global picture of the physical structure of the Earth. With the CHAMP, GRACE, GOCE and GRACE Follow On missions mass distribution and mass transport in the Earth system can be systematically observed and monitored from space. A wide range of Earth science disciplines benefit from these data enabling improvements in applied models providing new insights into Earth system processes e.g. monitoring the global water cycle, ice sheet and glacier melting or sea level rise or establishing new operational services. Long time series of mass transport data are needed to disentangle anthropogenic and natural sources of climate change impacts on the Earth system. In order to secure sustained observations on a long term basis space agencies and the Earth science community are currently planning future satellite gravimetry mission concepts to enable higher accuracy and better spatial and temporal resolution. This Special Issue provides examples of recent improvements in gravity observation techniques and data processing and analysis applications in the fields of hydrology, glaciology and solid Earth based on satellite gravimetry data as well as concepts of future satellite constellations for monitoring mass transport in the Earth system.
