Essential Engineering Thermodynamics Yumin Zhang, 2022-06-01 Engineering Thermodynamics is a core course for students majoring in Mechanical and Aerospace Engineering Before taking this course students usually have learned textit Engineering Mechanics Statics and Dynamics and they are used to solving problems with calculus and differential equations Unfortunately these approaches do not apply for Thermodynamics Instead they have to rely on many data tables and graphs to solve problems In addition many concepts are hard to understand such as entropy Therefore most students feel very frustrated while taking this course The key concept in Engineering Thermodynamics is state properties If one knows two properties the state can be determined as well as the other four properties Unlike most textbooks the first two chapters of this book introduce thermodynamic properties and laws with the ideal gas model where equations can be engaged In this way students can employ their familiar approaches and thus can understand them much better In order to help students understand entropy in depth interpretation with statistical physics is introduced Chapters 3 and 4 discuss control mass and control volume processes with general fluids where the data tables are used to solve problems Chapter 5 covers a few advanced topics which can also help students understand the concepts in thermodynamics from a broader perspective

Steady State and Time Dependent Compressed Air Energy Storage Model Validated with Huntorf Operational Data and Investigation of Hydrogen Options for a Sustainable Energy Supply Friederike Kaiser, 2020-12-17 Wind power and photovoltaic energy play a significant role in sustainable energy systems However these two renewable energy sources do not generate electrical energy on demand and are subject to natural fluctuations Thus the need for compensatory measures arises Compressed air energy storage power plants CAES are a possible solution to providing negative and positive control energy in the electric grid However in contrast to other energy storage devices such as pumped hydro energy storage or batteries the storage medium compressed air hardly contains any energy or more precisely enthalpy Yet compressed air storage allows the operation of highly efficient gas turbines which are not only particularly fast available but also achieve better efficiency than combined cycle power plants used today as illustrated by the example of the modern gas and steam

power plant Irsching with η_{tc} 60% from 2011 compared to the 20 years older McIntosh CAES with η_{tc} 82.4 %. In this thesis the calculation methods for the thermodynamics of the CAES process are presented and validated by measured data from the operations of the CAES power plant Huntorf. Both the steady state and the dynamic time dependent analyses of the process take place. The characteristic value efficiency is discussed in detail since numerous different interpretations for CAES exist in the literature. A new calculation method for the electric energy storage efficiency is presented and a method for the calculation of an economically equivalent electricity storage efficiency is developed. Consideration is given to the transformation of the CAES process into a hydrogen driven and thus greenhouse gas free process. Finally a model CAES system is tested in a 100 % renewable model environment. Consequently it can be stated that in the steady state thermodynamic calculation in particular the consideration of realistic isentropic efficiencies of compressors and turbines is essential to correctly estimate the characteristic values of the process. Furthermore a steady state view should always be accompanied by dynamic considerations since some process characteristics are always time dependent. The simulation shows that by mapping transient operating conditions the overall efficiency of the system must be corrected downwards. Nevertheless in the model environment of a 100 % renewable energy system it has been shown that a CAES is a useful addition that can provide long term energy storage.
