Interoperating Geographic Information Systems Andrej Vckovski, Kurt E. Brassel, Hans-Jörg Schek, 1999-03-04 This book constitutes the refereed proceedings of the Second International Conference on Interoperating Geographic Information Systems INTEROP 99 held in Zurich Switzerland in March 1999 The volume presents 22 revised full papers carefully reviewed and selected for inclusion in the book Also included are three invited full papers. The book addresses various topics of database interoperability and spatial data processing in particular identification infrastructure implementation vectors and graphics semantics heterogeneous databases and representation Advanced Tools and Methods for Treewidth-Based Problem Solving M. Hecher, 2022-11-15 This book Advanced Tools and Methods for Treewidth Based Problem Solving contains selected results from the author's PhD studies which were carried out from 2015 to 2021 For his PhD thesis Markus Hecher received the EurAI Dissertation Award 2021 and the GI Dissertation Award 2021 amongst others The aim of the book is to present a new toolkit for using the structural parameter of treewidth to solve problems in knowledge representation and reasoning KR and artificial intelligence AI thereby establishing both theoretical upper and lower bounds as well as methods to deal with treewidth efficiently in practice The key foundations outlined in the book provide runtime lower bounds under reasonable assumptions in computational complexity for evaluating quantified Boolean formulas and logic programs which match the known upper bounds already published in 2004 and 2009 The general nature of the developed tools and techniques means that a wide applicability beyond the selected problems and formalisms tackled in the book is anticipated and it is hoped that the book will serve as a starting point for future theoretical and practical investigations which will no

work also proposes a new model to estimate the SRT for different request types database access requests This model will allow the cloud service provider and its customers to establish an appropriate SLA relative to the expected performance of the services available in the cloud Location-Based Services Jochen Schiller, Agnès Voisard, 2004-05-21 Location based services LBS are a new concept integrating a user's geographic location with the general notion of services such as dialing an emergency number from a cell phone or using a navigation system in a car Incorporating both mobile communication and spatial data these applications represent a novel challenge both conceptually and technically. The purpose of this book is to describe in an accessible fashion the various concepts underlying mobile location based services These range from general application related ideas to technical aspects Each chapter starts with a high level of abstraction and drills down to the technical details Contributors examine each application from all necessary perspectives namely requirements services data and scalability An illustrative example begins early in the book and runs throughout serving as a reference This book defines the LBS field and identifies its capabilities challenges and technologies. The contributors are recognized experts from academia and industry Coverage includes navigation systems middleware interoperability standards and mobile communications A sample application the find friend application is used throughout the book to integrate the concepts discussed in each chapter Database Modeling and Design Toby J. Teorey, Sam S. Lightstone, Tom Nadeau, H.V. Jagadish, 2011-02-10 Database Modeling and Design Fifth Edition focuses on techniques for database design in relational database systems This extensively revised fifth edition features clear explanations lots of terrific examples and an illustrative case and practical advice with design rules that are applicable to any SQL based system. The common examples are based on real life experiences and have been thoroughly class tested This book is immediately useful to anyone tasked with the creation of data models for the integration of large scale enterprise data It is ideal for a stand alone data management course focused on logical database design or a supplement to an introductory text for introductory database management In depth detail and plenty of real world practical examples throughout Loaded with design rules and illustrative case studies that are applicable to any SQL UML or XML based system Immediately useful to anyone tasked with the creation of data models for the integration of large scale enterprise data
